

HOLOGRAM SCREEN

5

ABSTRACT OF THE DISCLOSURE

10 A hologram screen easily produced by using a  
transmission-type hologram film, permitting images to be  
seen from the side of the projector, having a transparent  
member 11 and a hologram film 12 stuck to the transparent  
member 11, and produces the image by projecting image-  
forming light 3 from the projector 2, the hologram film  
12 being of the transmission-type, a reflector 13 for  
15 reflecting the image-forming light 3 being arranged on  
the back surface side 122 of the hologram film 12.
